

Save the Date

to **xplore** new possibilities
in transplant diagnostics.

Coming Soon!

Everything you need into one cohesive software.

Say goodbye to the clutter of multiple platforms and tools;
MatchX consolidates all your essential applications into
one intuitive interface, streamlining your workflow
and increasing your efficiency.

Designing the Next Generation MATCH IT!

User Experience Design

Design Research

Human Factors

Engineering

We are working with a tight-knit team of ethnographers, biomedical engineers, cognitive psychologists, industrial designers, interaction designers, systems architects, electrical engineers, and software specialists.

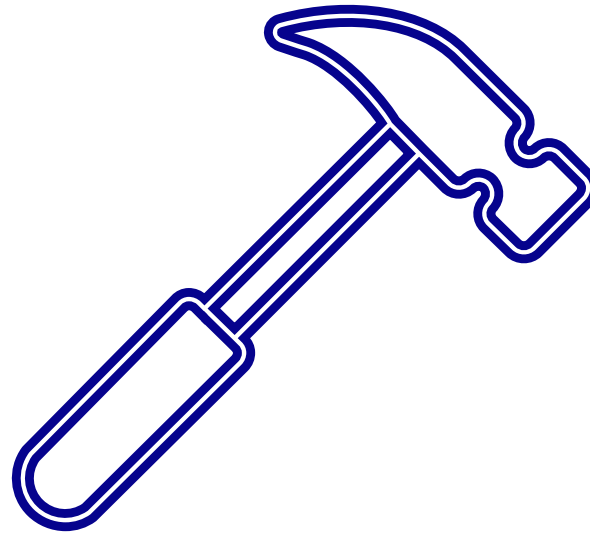

A great software, made even better

Enhancing what is already working for you

Bringing all the modules together for a seamless integration

Driving consistency for a more intuitive and streamlined experience

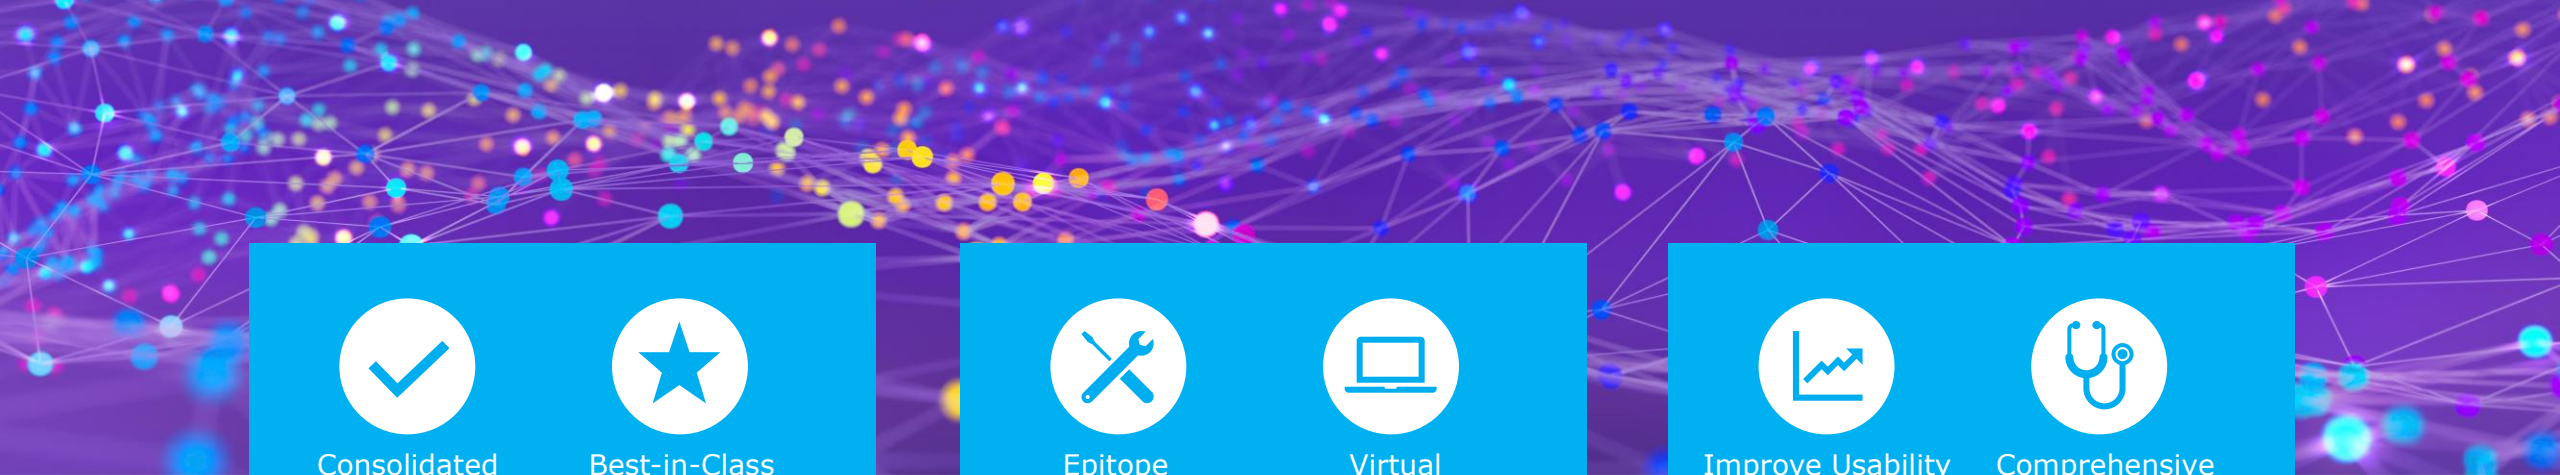

The potential is big
so we built from the ground up

Our starting point was simple: Reshape MATCH IT! for the Next Generation

There are several highly critical lessons learned in our research.

	
Consolidated Software	Best-in-Class Analysis Features
	
Cybersecurity Updates	Global Regulatory Features

Consolidate and Improve

	
Epitope Analysis Tools	Virtual Crossmatch
	
QC Modules	Tools for Complex Analysis

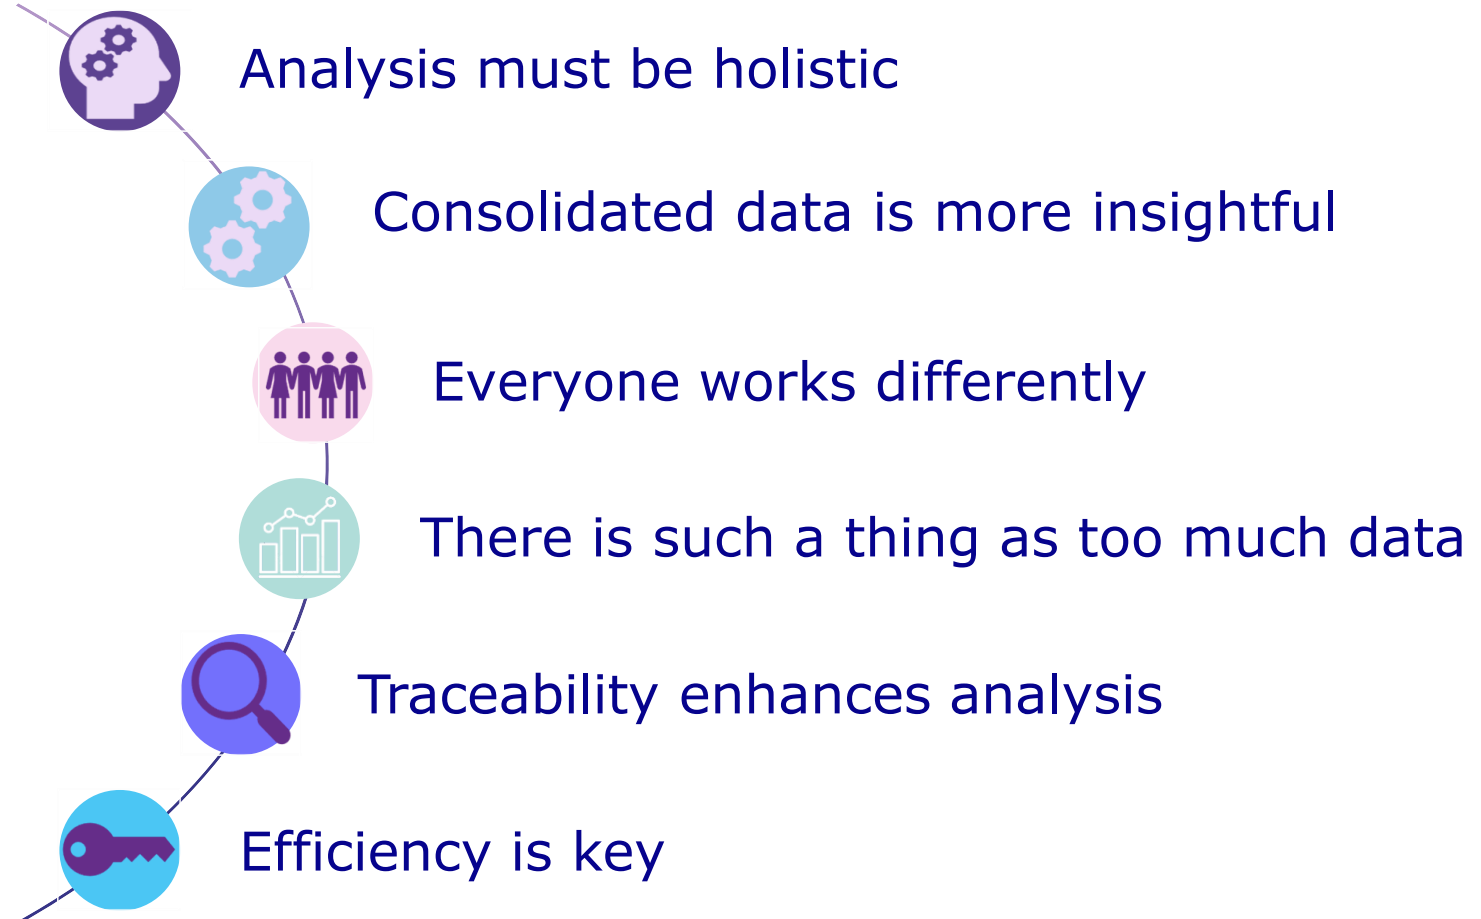

Integrate and Expand

	
Improve Usability & Decrease Complexity	Comprehensive Patient History
	
Reporting/LIS Compatible Exports	Interactive User Guides & Training Tools

Streamlined and Modernize

 **MatchX designed to meet your needs**
Differentiating with Cutting Edge Matching Analytics

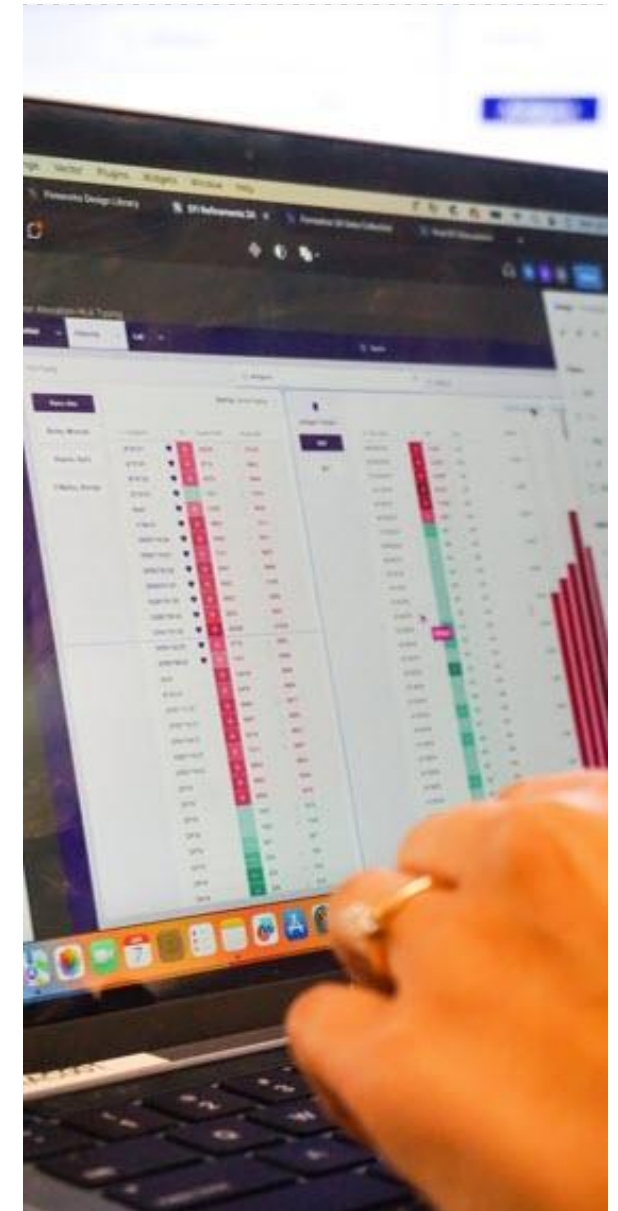

Several highly critical lessons learned from our research and your feedback

Analysis must be holistic

Each step in your process is only one piece of the puzzle

- **Historical data** is critical in your decision making
 - Patient and donor typing
 - Patient history and past results
 - Antigen history and trends

Consolidated data is more insightful

You are carrying the weight of putting clues together

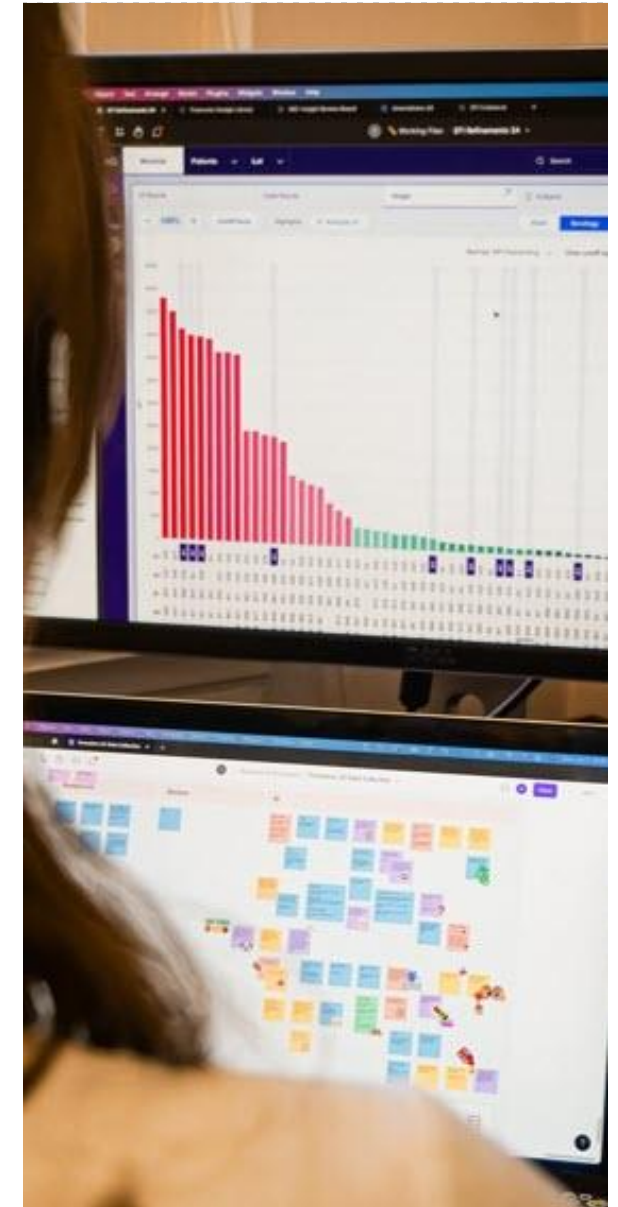

- Just looking at data is **not insightful enough**
 - Batch performance
 - Assay Lot trends and characteristics
 - Comparison of data
 - Identification of patterns in results
 - Virtual crossmatch insights

Everyone works differently

Workflows vary by working style, role, and site

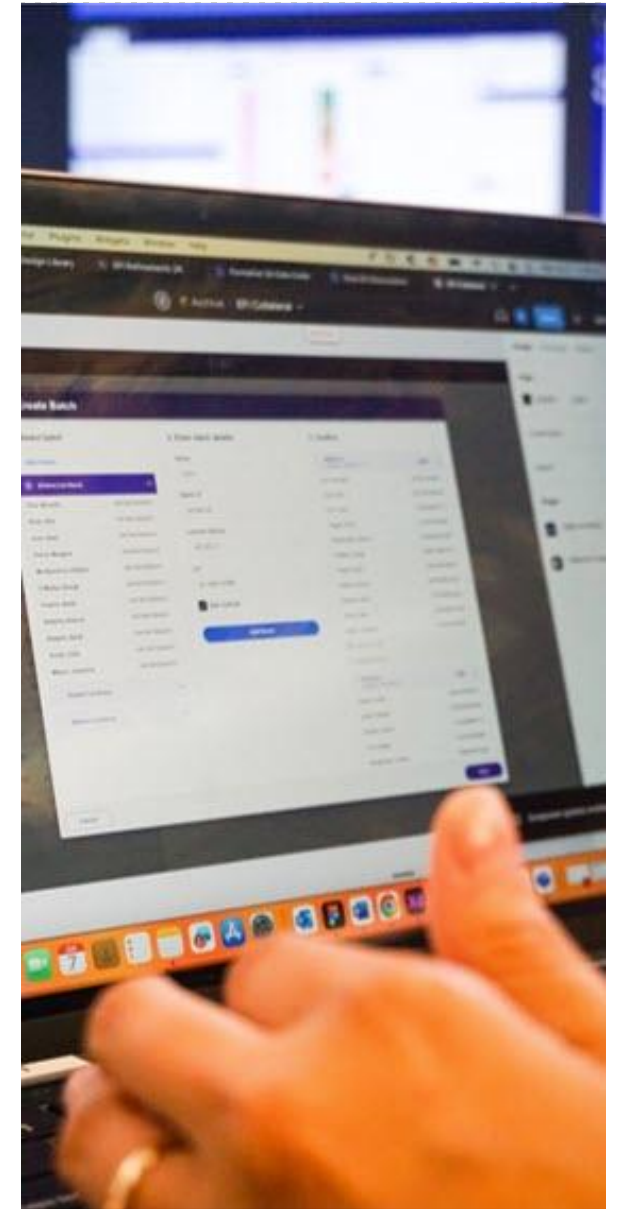

- **Flexibility** in the new design to allow you to continue working the way you like
- **Adaptability** of the software to show only what is relevant to the lab team and individual users
- **Customization** is important to accommodate different work settings
 - Adjustable screen layout
 - A comprehensive variety of settings, user and lab specific

Efficiency is key

Time spent on extra workflow steps multiplies quickly

- The new design must **streamline and optimize the workflow**
 - Simpler, more intuitive navigation
 - More comprehensive batching and importing workflows
 - Improved reporting and exporting experience
 - More intuitive labelling and location of tools

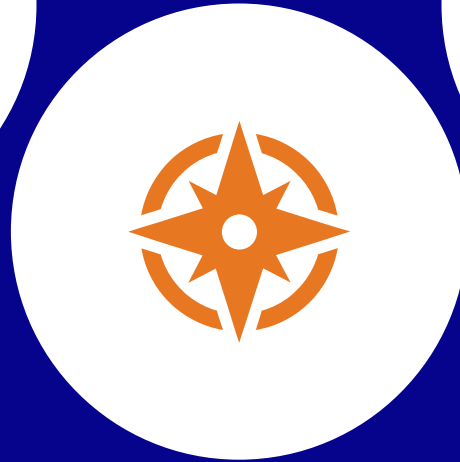

The pillars of Next Gen MATCH IT!

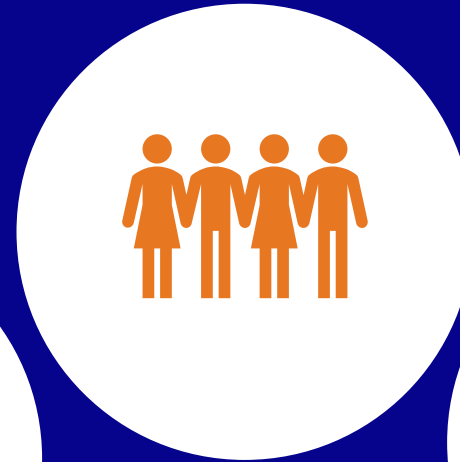

Efficient
Experience

Integrated
Data

Seamless
Navigation

Collaborative
Tools

Comprehensive
Analysis

Focus on the Science, not the Software

Allows you to
work your way

Expedites your
workflows

Puts data at your
fingertips

Presents meaningful
integration of
information and results
